About this document

This document defines what is delivered with MoneyCounter version 2.0.0.0, the environment the product requires, the licensing terms in functional outline and the third-party software components the product contains.

Prices, delivery dates and the parties' details are not part of this document; they are set in the contract.

1. Product identification

Item	Value
Product	MoneyCounter
Version	2.0.0.0
Release date	2026-10-03
Type of software	Windows desktop application for counting cash by denomination
Deployment	Desktop software installed on the customer's computers
Publisher	iMobile

MoneyCounter totals cash from the number of banknotes of each denomination that the user types in for the selected currency, and keeps a local history of counts with the date, a comment and the breakdown by denomination. It is not a cash register or point-of-sale program: it records no sales, issues no receipts and does not talk to any hardware.

Installed on a workstation from a Windows Installer package; consists of a single statically linked executable, `MoneyCounter.exe`. There is no server part. Data is kept in the Windows user profile. For the Pro edition the program contacts the iMobile account server `accounts.new-imobile.com`; the Free edition works without a network.

2. Delivery set

2.1. Contents

- Installer package `MoneyCounter-2.0.0.0-Setup.msi` (Windows Installer, 64-bit, about 8 MB) containing the executable `MoneyCounter.exe`
- Documentation set: product description and functional specification, installation and administration guide, user guide
- For the Pro edition: the right of use assigned to the licensee's e-mail address; no key file or physical media is supplied

2.2. Method of delivery

Download of the installer package from the product page on the vendor's website: https://new-imobile.com/en/moneycounter/. No physical media is used.

2.3. Documentation

The documentation set consists of:

- Product Description and Functional Specification
- Installation and Administration Guide

© 2026 iMobile

- User Guide
- Software Lifecycle, Maintenance and Support
- Delivery Specification and Third-Party Components (this document)
- Security and Data Protection Statement
- a country annex for the customer's jurisdiction

3. Operating environment

3.1. Supported platforms

- Windows 10, 64-bit
- Windows 11

3.2. Hardware and software requirements

- A computer running 64-bit Windows 10 or Windows 11; no separate CPU or memory requirements are defined
- About 23 MB of disk space for the program, plus the database file in the user profile
- Administrator rights for installation only
- Internet access only to activate and check the Pro edition: outbound HTTPS (port 443) to `accounts.new-imobile.com`
- For currency names in the interface language: the ICU component included in Windows 10 version 1903 and later; without it the names are shown in English
- No additional runtimes, libraries or database server are required

4. Licensing

4.1. Editions and terms of use

Two editions in one installer package. Free edition: no time limit and no registration; 6-digit display, the smallest denomination of each currency hidden, the directory of currencies and denominations not editable. Pro edition: a one-time purchase, the right is assigned to an e-mail address; 10-digit display, all denominations, user-defined currencies and denominations. For one address Pro is active in one installation (Windows user profile) at a time: activating elsewhere moves it there.

4.2. Activation

The Free edition needs no activation. Pro is activated in the program (menu ? → Activation…): the user enters an e-mail address, the iMobile account server sends a one-time code to it (valid for 30 minutes), and with the code the program obtains a token and a signed terms string. The vendor receives: the e-mail address, the product identifier `moneycounter`, the interface language code, the code from the e-mail, then the token and a machine fingerprint — a SHA-256 hash of the Windows MachineGuid, the computer name and the system volume serial number. The reply signature (ECDSA P-256) is verified with a public key embedded in the program. A stored Pro confirmation works without the server for 30 days after the last successful check; the check is repeated in the background on every start. Counts and other user data are not transmitted.

© 2026 iMobile

4.3. Updates

The program has no automatic update and no check for new versions. A new version is published on the vendor's website as a new MSI package; installing it replaces the installed version (Windows Installer major upgrade) and keeps user data.

5. Interface languages

16 languages: English, Russian, German, Spanish, Chinese, Japanese, Korean, Arabic, Turkish, Persian, Portuguese (Brazil), French, Italian, Polish, Vietnamese, Indonesian. The installer is in English only.

6. Third-party components

Component	Version	Licence	Purpose
Embarcadero RAD Studio (C++Builder): RTL, VCL, FireDAC	13	Commercial (Embarcadero)	runtime library, windowing UI, database access and HTTP client; statically linked
SQLite	3.42.0	Public Domain	embedded database (currency directory, history of counts); statically linked as part of FireDAC
TMS VCL UI Pack	—	Commercial (TMS Software)	denomination grid, buttons, log field, date field
EhLib	—	Commercial (EhLib Team)	history table and input fields
JEDI Visual Component Library (JVCL)	2025.10	MPL 1.1	seven-segment display
JEDI Code Library (JCL)	—	MPL 1.1	support library required by JVCL
WiX Toolset	3.14.1	MS-RL	builds the MSI package; standard setup dialogs and the launch helper action inside the package

Each third-party component is used under its own licence, named in the table. The table is a human-readable component list; a machine-readable bill of materials (SPDX or CycloneDX) is not part of this delivery.

7. Known limitations

- Quantities are entered by hand only; there is no exchange with hardware (banknote counters or detectors, scales, cash registers)
- The program is not cash-register software: it records no sales and produces no receipts or accounting documents
- No printing and no export of the history (CSV, Excel, PDF); only a copy of the database file is available
- No password sign-in or access control; the database is not encrypted
- One database per Windows account; no shared network use and no synchronisation between computers
- Built-in sets contain banknotes only (no coins) and are not updated online; there is no conversion between currencies
- A currency cannot be deleted; denomination rows can be removed only from the end of the list
- On every start the program deletes currencies named «Рубли», «Доллары», «Евро» or «Гривны» (sample data of pre-2.0 versions) and history records with a zero amount

© 2026 iMobile

- The Pro edition needs to reach the account server at least once every 30 days; otherwise the program runs as Free until the next successful check
- No automatic update; the installer package and the executable are not code-signed; the installer is in English
